# DuPont Teflon® Platinum Pro™ Professional Use

Your Sunbeam Professional Wok features a special scratch and abrasive-resistant non-stick cooking coating that makes it safe to use metal utensils when cooking. Teflon® Platinum Pro™ – Professional Use is DuPont's toughest non-stick coating to date – up to 10 times more scratch resistant than single layer non-stick coatings.\*

DuPont is the world leader in non-stick coatings and today more than 2 billion households have Teflon® non-stick coated cookware.

*Teflon® Platinum Pro™ – 3 layer scratch resistant coating*

Teflon® Platinum Pro™ is a premium 3 layer non-stick coating. It features special scratch resistant minerals causing metal utensils to slide over these particles without damaging the Teflon® matrix. This preserves the release properties of the non-stick coating and the life of the Professional Wok.

The result is a non-stick coating that can be treated like ordinary cookware, enabling the use of metal utensils. However, Sunbeam recommends that care is taken with the non-stick coating when using metal utensils.

Do not use sharp objects or cut food inside the Professional Wok. Damage caused to your Professional Wok as a result of misuse of metal utensils will void your warranty.

*Results from DuPont's 'In-house Cooking Abuse Test'*

*\* The images shown here and performance claims are based upon the DuPont In-house Cooking Abuse Test used to evaluate scratch resistance and release properties of non-stick coatings.*

# Features of your Professional Wok

## 2400 Watt 'Heat-Wall' Element

Your Sunbeam Professional Wok features a special 2400 watt 'heat-wall' element. This element wraps around the base and side walls of your wok providing superior cooking temperatures and heat distribution.

*Completely cast-in element*

The heat is quickly channelled from the base of the wok up the wall. This 'heat-wall' system creates the ideal wok cooking environment for fast and easy cooking.

*Heat-wall element channels heat upwards*

The 'heat-wall' element is completely cast into the heavy duty base. This increases the life of the element and provides faster heat distribution.

## Trigger-Release Control Probe with 15 Heat Settings

The heat control probe is thermostatically controlled with 15 settings to deliver perfect cooking control.

The indicator light switches 'on' when it is heating. When the wok has reached the desired temperature the indicator light switches 'off'. The indicator light will then cycle 'on' and 'off' as the thermostat maintains the set temperature.

The heat control probe is ergonomically designed with a handy trigger-release. Simply hold the probe and squeeze the trigger with your thumb to remove it.

# Using your Professional Wok

## Before First Use

Ensure any stickers are removed from the product. Wash in warm soapy water, rinse thoroughly and dry your wok and lid.

## Do not immerse the heat control probe in water or any other liquid.

1. Insert the heat control probe into the socket of the wok.
2. Plug the cord into a 230-240V power outlet and turn the power on.
3. Set the heat control probe dial to the desired temperature setting, or the recommended temperature setting for your required recipe.

Allow 5 minutes for your wok to reach the temperature setting you have selected. The wok is now ready to use.

**Note:** The thermostat light on the heat control probe indicates the temperature at which the dial is set.

This light will remain on until the set temperature has been reached and then will cycle on and off throughout cooking. This will ensure that the wok maintains the correct temperature.

## Detachable Cook & Clean Base

Your Sunbeam Professional Wok features a quick release detachable 'cook & clean' base. This spring loaded mechanism enables the base to be quickly and easily removed from the wok cooking vessel.

Simply turn the wok upside down and turn the release dial anti-clockwise as shown in the illustration below.

# Cooking Techniques

Various cooking methods can be used to make a wide variety of foods in your Sunbeam Professional Wok.

## **Stir-Frying**

Stir-frying is a quick cooking method conducted over very high heat. The wok should be hot before adding oil or any ingredients. Be sure to maintain maximum heat when stir-frying by cooking food in small batches. Use a constant tossing motion to ensure the food is evenly exposed to the heat and does not burn.

### **Tips When Stir-Frying**

- Meat should be cooked in batches, approximately 150g per batch. This prevents the temperature of the wok dropping too low and also prevents the meat from stewing. Once the meat is browned, remove it from the wok and continue cooking other ingredients like vegetables, sauce and noodles. Then return the meat to the wok to heat through and finish cooking.
- Vegetables and meat should be cut into uniform shapes and sizes before starting, as stir-frying relies on quick cooking for best results.
- Slice meats into thin strips (about 5cm long) so that they can cook quickly.
- If stir-frying marinated meat strips, drain off excess marinade as it tends to boil, which toughens the meat.
- Suitable oils for stir-frying include canola, sunflower, peanut or light olive oils.
- Stir-frying is done quickly. The shorter the cooking time, the less chance there is for the meat to toughen or overcook. This also keeps the food crisp and full of nutrients.

- Do not use the lid when stir-frying as stir-frying is a method of dry cooking and the steam droplets will toughen the meat.
- Serve stir-fried foods immediately to retain their crisp texture.

## **Shallow Frying**

Shallow frying is a method used to cook and crispen foods in a small amount of oil. The food is cooked at a lower temperature so that a brown crust forms on the underside. The food is then turned over to brown the other side. Usually 1 cup of oil is sufficient for shallow frying.

## **Deep Frying**

Deep fried foods should be crispy on the outside and tender on the inside. The food should be coated with batter or breadcrumbs and placed in a larger quantity of hot oil.

### **Tips When Deep Frying**

- Preheat the oil to the desired temperature before adding food.
- Do not cover the wok with the lid when deep frying. This will prevent foaming or splattering of oil from condensation droplets.
- Wipe moisture from foods to avoid any splattering or foaming of oil.
- Do not fill the wok with more than 1.2 litres of oil. For best results use a vegetable oil for sweet foods and peanut oil for Asian style foods.
- Food should be fried in batches, a few pieces at a time. This prevents the oil temperature from dropping too low and also prevents a soggy crust from forming on food.
- Drain the food on paper towel as soon as it is removed from the oil.
- Always allow the oil to cool completely before removing from the wok.

# Cooking Techniques

## **Steaming**

Steamed foods are tender and juicy, retaining most of their nutritional value. Most foods are suitable for steaming, including fish, seafood, chicken, vegetables, buns and dumplings.

When steaming, foods can cook very quickly so be sure to monitor your cooking progress. Place food on the steaming rack provided and place in wok over simmering water or stock. Cover with glass lid.

**Note:** The liquid should only be just simmering. If the heat is too high it may cause the liquid to bubble up over the food. Heat settings 2-3 should be sufficient.

## **Stewing and Braising**

The wok can be used on a low heat to make your favourite stews and casseroles. The lid should be left on when stewing.

Braising is a variation to stir-frying where liquid is added at the end of stir-frying and the ingredients are left to simmer, usually uncovered.

# Care and Cleaning

Always turn the power **OFF** and **REMOVE** the plug from the power outlet before cleaning. Remove the control probe from the socket of the wok.

## **Teflon® Platinum Pro™ Non-Stick Coating**

Your wok features a special scratch and abrasive-resistant non-stick coating that makes it safe to use metal utensils when cooking.

However Sunbeam recommends that care is taken with the non-stick coating particularly when using metal utensils.

Do not use sharp objects or cut food inside the wok vessel. Sunbeam will not be liable for damage to the non-stick coating where metal utensils have been misused.

When cleaning the non-stick coating do not use metal (or other abrasive) scourers. After cleaning, dry the wok and lid thoroughly with a soft cloth before storing.

## **Heat Control Probe**

If cleaning is necessary, wipe over probe with a damp cloth.

**Do not immerse the control probe in water or any other liquid.**

## **Storage**

Store the control probe carefully in a safe place. Do not knock or drop it as this can damage the probe.

If damage is suspected, return the control probe to your nearest Sunbeam Service Centre for inspection.

## **Wok, Base and Glass Lid**

The wok, base and lid are fully immersible and can be washed in warm soapy water using a mild household detergent and a soft washing sponge.

For added convenience, they can also be cleaned in the dishwasher. Do not place the control probe in the dishwasher.

## **Removing Stubborn Stains**

Should your wok require additional cleaning of stubborn stains and build-up, the following method is recommended:

Combine: 2 tablespoons bicarbonate of soda and 2 teaspoons water.

1. Pre-heat the wok for approximately 1-1½ minutes on setting 3.
2. Turn the power OFF and remove the plug from the power outlet. Brush the above paste solution onto the non-stick surface, allow to stand for 1 hour.
3. Wash the wok in warm soapy water using a mild household cleaner and a soft washing sponge.

Dry with a soft cloth before storing.

## **To Clean Steaming Rack**

Wash in warm soapy water using a mild household detergent. Rinse thoroughly and dry with a soft cloth before storing.
